

RG-010 — OriginOS Lexicon Register Governance

Version: 1.0

Status: Proposed Constitutional Governance Standard

Authority: OriginOS Constitution

Applies To: OXL-001 (OriginOS Lexicon Register) and all future lexicon revisions

1. Purpose

This governance standard establishes the constitutional rules governing the OriginOS Lexicon Register (OXL).

The OXL is the authoritative constitutional language register of the OriginOS Discovery Programme.

Its purpose is to ensure that:

- constitutional terminology evolves scientifically rather than editorially;
- historical terminology is preserved;
- frozen Sprint manuscripts remain immutable;
- amendments are traceable;
- scientific evolution is transparent;
- every governing term has a verifiable constitutional basis.

The OXL governs **language**, not scientific truth. Scientific authority remains vested in constitutional recovery, ratification, determination, and amendment.

2. Constitutional Principle

Scientific discoveries establish constitutional authority. The OriginOS Lexicon Register records the language currently governing those discoveries.

Therefore:

- the Constitution governs the programme;
 - Sprints preserve the history of discovery;
 - Amendments modify governing understanding;
 - the OXL records the current governing terminology.
-

3. Scope

This standard governs:

- constitutional terms;
- definitions;
- historical terminology;
- aliases;
- semantic evolution;
- supersession;
- definition versioning;
- terminology status;
- lexical reconciliation.

It does **not** govern:

- mathematical proofs;
 - scientific findings;
 - dependency analysis;
 - implementation vocabulary;
 - editorial style outside constitutional terminology.
-

4. Authority Hierarchy

Where terminology conflicts exist, authority shall be resolved in the following order:

1. OriginOS Constitution
2. User-ratified Constitutional Determinations
3. Ratified Constitutional Amendments
4. Constitutionally admitted Sprint findings
5. Repeated constitutional practice corroborated across the corpus
6. Primary Sprint wording
7. Candidate recoveries

8. Governance recommendations
9. Reconciliation notes
10. Editorial recommendations

Frequency of use shall never override constitutional authority.

5. The OXL Is the Authoritative Language Register

The OXL shall become the single authoritative source for answering:

- What is the current canonical term?
- What does it currently mean?
- What did it previously mean?
- Why did it change?
- Which amendment changed it?
- Which Sprint first recovered it?
- What terms must be distinguished from it?

No publication shall independently redefine constitutional terminology.

6. Term Identity

Every constitutional concept receives one permanent OXL Identifier.

Example:

OXL-0042

Identifiers:

- are permanent;
- are never reused;
- survive renaming;
- survive amendments;
- survive supersession.

If two terms are later shown to denote the same phenomenon:

- one OXL ID survives;
 - the second becomes an alias;
 - the merger is documented.
-

7. Definition Versioning

Every materially distinct definition receives its own Definition ID.

Example:

DEF-000157

A new Definition ID shall be created whenever:

- wording changes materially;
- scope changes;
- necessary conditions change;
- exclusions change;
- constitutional status changes;
- governing authority changes.

Editorial corrections alone do not require a new Definition ID.

8. Historical Preservation

Historical definitions shall never be deleted.

Every superseded definition shall remain permanently available together with:

- source;
- Sprint;
- section;
- authority;
- replacement;
- reason for supersession.

OriginOS preserves scientific history rather than rewriting it.

9. Frozen Sprint Protection

Once a Sprint has entered Constitutional Freeze:

- definitions inside the manuscript shall not be rewritten;
 - historical wording remains intact;
 - later corrections shall appear only through:
 - Constitutional Amendments;
 - Definition History;
 - updated OXL entries;
 - future publication editions.
-

10. Definition Completeness Standard

A governing definition shall not be considered constitutionally complete unless it identifies:

1. observed phenomenon;
2. denoted concept;
3. constitutional classification;
4. necessary conditions;
5. exclusion conditions;
6. typed dependencies;
7. mandatory distinctions;
8. governing authority;
9. superseded meanings;
10. unresolved questions;
11. applicable amendments;
12. confidence level.

Missing information shall be recorded as a Definition Gap rather than silently invented.

11. Definition Status

Every definition shall carry exactly one status.

Allowed statuses are:

- Candidate
- Recovered
- Admitted
- Ratified
- Canonical
- Historical
- Superseded
- Amended
- Rejected
- Deprecated
- Editorial
- Unresolved
- Unverified

No additional status values may be introduced without constitutional approval.

12. Definition Confidence

Every definition shall carry a confidence classification.

Permitted values:

- Source-Verified
- Corroborated
- Provisional
- Disputed
- Unsupported

Definitions shall not be published as canonical while marked Provisional or Unsupported.

13. Mandatory Distinctions

Every governing definition shall identify nearby concepts that must not be conflated.

Examples include:

- Reality / State
- State / Context
- Means / Capability
- Purpose / Intent
- Commitment / Selection
- Computation / Transformation
- Economic Value / Enterprise Value

Where no distinction exists, the register shall explicitly record "None Identified."

14. Semantic Evolution

Changes to terminology shall be classified as one of:

- clarification;
- refinement;
- restriction;
- extension;
- replacement;
- merger;
- split;
- supersession;
- rejection;
- restoration.

Every change shall include its scientific rationale.

15. Lexical Reconciliation Procedure

The Constitutional Reconciliation Programme shall reconcile terminology by:

1. independently discovering all candidate terms in the corpus;
2. locating every substantive definition;
3. recording exact provenance;
4. identifying conflicting formulations;
5. determining governing authority;
6. assigning definition versions;
7. updating the OXL;

8. preserving historical formulations;
9. reporting unresolved discrepancies before publication.

Reconciliation shall never silently choose among conflicting definitions.

16. Lexical Gap Detection

Every OXL entry shall be audited for applicable Definition Gap codes as defined in OXL-001.

Gap codes shall remain attached until formally resolved.

Removing a gap requires:

- supporting evidence;
 - constitutional determination;
 - updated register entry.
-

17. Cross-Register Integration

Every OXL entry shall reference, where applicable:

- OCDR entry (dependency record);
- OFR findings;
- OPR primitive record;
- OLR law record;
- ODR distinction record;
- OAR amendment record;
- OUQ unresolved-question record.

The OXL shall serve as the navigation hub for constitutional terminology.

18. Amendment Rules

Whenever a Constitutional Amendment changes terminology, the amendment shall:

1. identify affected OXL IDs;
 2. create new Definition IDs where required;
 3. record superseded definitions;
 4. update governing terminology;
 5. preserve historical wording;
 6. identify dependent concepts requiring review through the OCDR.
-

19. Sprint Closure Requirements

Before a Sprint enters Constitutional Freeze, the OXL shall certify:

- all new terms registered;
- all revised definitions versioned;
- all deprecated terms identified;
- all mandatory distinctions updated;
- all dependencies synchronized with the OCDR;
- all unresolved questions recorded;
- all new Definition Gap codes assigned.

No Sprint shall be certified as frozen until this audit is complete.

20. Publication Rules

Published editions of OriginOS shall derive constitutional terminology exclusively from the current OXL.

Historical publications shall retain the language in force at the time they were frozen.

Readers shall be able to trace every published definition to:

- its governing OXL entry;
 - its Definition History;
 - its constitutional authority.
-

21. Governance Responsibilities

Constitutional Reconciliation Programme

Responsible for:

- maintaining the OXL;
- recording definition history;
- identifying conflicts;
- auditing completeness;
- preserving provenance.

Discovery Programme

Responsible for:

- recovering new concepts;
- proposing definitions;
- justifying amendments;
- identifying distinctions.

The Discovery Programme proposes language.

The OXL governs language.

22. Constitutional Determination

The OriginOS Lexicon Register is the constitutional language authority of the OriginOS Discovery Programme.

It shall preserve the complete semantic history of every constitutional concept while identifying one current governing formulation.

Scientific discoveries establish authority.

The OXL records that authority.

No constitutional term shall be changed, removed, merged, or superseded except through constitutionally authorized reconciliation or amendment, and no frozen Sprint manuscript shall be altered to reflect later terminology.

Relationship to the Governance Suite

With RG-010 in place, the governance documents form a coherent sequence:

- **RG-001** – Research Governance (*historical/superseded by the Constitution where applicable*)
- **RG-002** – Artifact Classification
- **RG-003** – Constitutional Amendment Governance
- **RG-004** – Evidence Register Governance
- **RG-005** – Dependency Recovery Governance
- **RG-006** – Primitive Admission Governance
- **RG-007** – Scientific Question Formulation
- **RG-008** – Research Lifecycle Governance
- **RG-009** – Constitutional Dependency Register Governance
- **RG-010** – **OriginOS Lexicon Register Governance**

RG-010 provides the constitutional rules for maintaining the language of OriginOS, while **OXL-001** is the living register that implements those rules. Together, they separate governance policy from operational constitutional records, which is a sound architecture for a long-lived scientific programme.
