

RG-011 — OriginOS Constitutional Freeze Standard

Version: 1.0

Status: Proposed Constitutional Governance Standard

Authority: OriginOS Constitution

Applies To: All Discovery Sprints, Constitutional Amendments, Constitutional Reconciliation Programme (CRP), and all Constitutional Registers

1. Purpose

This standard establishes the constitutional rules governing the freezing of scientific discoveries within the OriginOS Discovery Programme.

The Constitutional Freeze exists to preserve the integrity of scientific history while allowing the programme to continue evolving through controlled amendments rather than retrospective editing.

Its objectives are to:

- preserve immutable scientific history;
 - separate discovery from reconciliation;
 - prevent silent historical revision;
 - establish authoritative publication baselines;
 - ensure complete auditability;
 - support reproducible constitutional science.
-

2. Governing Principle

Scientific discoveries are immutable once constitutionally frozen. Future scientific progress shall occur through amendments, not historical rewriting.

A Constitutional Freeze preserves:

- what was discovered;

- how it was discovered;
- the evidence available at that time;
- the constitutional determinations made at that time.

It does not prevent future discoveries.

It prevents the alteration of historical scientific records.

3. Scope

This standard governs:

- Discovery Sprint manuscripts;
- Sprint appendices;
- constitutional findings;
- canonical determinations;
- mathematical recoveries;
- Sprint publication editions.

It does **not** govern:

- Constitutional Registers;
- Constitutional Amendments;
- reconciliation reports;
- publication errata;
- implementation documentation.

Those remain living artifacts.

4. Constitutional Freeze Definition

A Constitutional Freeze is the formal declaration that a Discovery Sprint has reached constitutional completion.

Following a Freeze:

- the Sprint manuscript becomes historically immutable;
- its findings become fixed historical evidence;
- future corrections shall occur through amendments;

- publication editions may incorporate amendments without altering the historical manuscript.
-

5. Freeze Eligibility

A Sprint may enter Constitutional Freeze only after satisfying all mandatory certification requirements.

A Sprint is not eligible merely because writing has stopped.

Scientific completeness, not editorial completion, governs eligibility.

6. Mandatory Freeze Certification

Every Sprint shall successfully complete the following audits.

CF-01 — Discovery Completeness Audit

Verify that:

- all planned research questions have been investigated;
 - no mandatory constitutional method steps remain incomplete;
 - unresolved questions have been explicitly recorded.
-

CF-02 — Primitive Admission Audit

Verify:

- all candidate primitives have final dispositions;
 - admitted primitives are justified;
 - rejected primitives remain documented.
-

CF-03 — Finding Audit

Verify:

- every substantive finding has:
 - Finding ID;
 - constitutional status;
 - supporting evidence;
 - disposition.
-

CF-04 — Dependency Audit

Verify:

- OCDR updated;
 - typed dependencies recorded;
 - hidden dependencies identified;
 - amendment impacts documented.
-

CF-05 — Lexicon Audit

Verify:

- all new terminology entered into OXL;
 - revised definitions versioned;
 - deprecated terminology identified;
 - mandatory distinctions updated.
-

CF-06 — Mathematical Consistency Audit

Verify:

- symbols remain internally consistent;
 - definitions agree with mathematical notation;
 - equations reference admitted concepts.
-

CF-07 — Constitutional Consistency Audit

Verify:

- no Sprint contradicts the Constitution;
 - no internal contradictions remain unresolved;
 - dependency order respected.
-

CF-08 — Cross-Sprint Consistency Audit

Verify:

- interactions with earlier Sprints documented;
 - amendments identified;
 - historical contradictions explained rather than hidden.
-

CF-09 — Unresolved Question Audit

Verify:

- every unresolved question entered into the OUQ Register;
 - no unresolved issue is silently resolved.
-

CF-10 — Publication Readiness Audit

Verify:

- manuscript internally coherent;
- register references complete;
- constitutional terminology synchronized.

Passing this audit does **not** imply future immutability of understanding—only readiness for historical publication.

7. Freeze Declaration

A Sprint enters Constitutional Freeze only after formal declaration.

The declaration shall record:

- Sprint identifier;
 - date;
 - certifying authority;
 - certification results;
 - publication version;
 - known unresolved questions;
 - applicable amendments at the time of freeze.
-

8. Effects of Freeze

After Constitutional Freeze:

Permitted

- publish the manuscript;
- reference it;
- annotate it externally;
- issue amendments;
- reconcile terminology in future editions;
- link to updated registers.

Prohibited

- rewrite findings;
- change wording;
- alter mathematical recovery;
- replace definitions;
- remove rejected concepts;
- silently resolve unresolved questions.

The frozen manuscript remains part of the permanent scientific record.

9. Amendment Rule

Every scientific correction discovered after Freeze shall be introduced through a Constitutional Amendment.

An amendment shall:

- identify the affected Sprint(s);
- identify affected findings;
- identify affected definitions;
- identify affected dependencies;
- explain the scientific rationale;
- specify the new governing formulation.

The amendment supplements history; it does not rewrite it.

10. Publication Editions

Two distinct publication classes shall exist.

Historical Edition

An exact reproduction of the frozen manuscript.

No scientific changes permitted.

Editorial corrections shall be limited to obvious typographical or formatting defects and must be documented.

Consolidated Edition

A reconciled publication produced by the CRP.

It may incorporate:

- approved amendments;
- current canonical terminology;
- updated register references;
- explanatory annotations.

Every departure from the historical manuscript shall be traceable.

11. Constitutional Registers During Freeze

Freezing a Sprint does **not** freeze:

- OXL — OriginOS Lexicon Register
- OCDR — Constitutional Dependency Register
- OFR — Finding Register
- OPR — Primitive Register
- OLR — Law Register
- ODR — Distinction Register
- OUQ — Unresolved Questions Register
- OAR — Amendment Register

These registers remain living constitutional artifacts.

12. Amendment Traceability

Every amendment affecting a frozen Sprint shall record:

- Amendment ID;
- affected Sprint;
- affected findings;
- affected definitions;
- affected laws;
- affected primitives;
- affected dependencies;
- governing rationale.

Readers shall always be able to reconstruct:

Historical Sprint

↓

Later Amendment

↓

Current Canonical Position

13. Freeze Levels

The programme recognizes four levels of constitutional maturity.

Level 0 — Active Discovery

Scientific recovery underway.

No Freeze.

Level 1 — Candidate Freeze

Scientific work appears complete.

Certification pending.

Level 2 — Constitutionally Frozen

All certification audits passed.

Historical record established.

Level 3 — Historically Archived

A later edition supersedes the publication for current use.

The original remains permanently preserved.

14. Reopening a Frozen Sprint

A frozen Sprint shall never be reopened for editing.

If future evidence demonstrates error:

1. preserve the historical manuscript;
2. issue an Amendment;
3. update constitutional registers;
4. incorporate the correction into future consolidated editions.

The scientific record evolves without destroying its own history.

15. Responsibilities

Discovery Programme

Responsible for:

- completing scientific recovery;
 - identifying unresolved questions;
 - proposing amendments where necessary.
-

Constitutional Reconciliation Programme

Responsible for:

- freeze certification;
 - register synchronization;
 - consolidated publications;
 - amendment incorporation;
 - historical preservation.
-

Programme Ratifier

Responsible for:

- approving Constitutional Freeze;

- confirming audit completion;
 - authorizing publication.
-

16. Freeze Certificate

Every frozen Sprint shall receive a Constitutional Freeze Certificate containing:

- Sprint identifier;
- publication version;
- freeze level;
- freeze date;
- certifying authority;
- audit results;
- register synchronization status;
- outstanding unresolved questions;
- applicable amendments.

The certificate becomes part of the permanent constitutional record.

17. Relationship to Other Governance Standards

This standard operates in conjunction with:

- **RG-002** — Artifact Classification
- **RG-003** — Constitutional Amendment Governance
- **RG-006** — Primitive Admission Governance
- **RG-008** — Research Lifecycle Governance
- **RG-009** — Constitutional Dependency Register Governance
- **RG-010** — OriginOS Lexicon Register Governance

Together they ensure that scientific discovery, constitutional governance, reconciliation, and publication remain distinct but coordinated activities.

18. Constitutional Determination

The Constitutional Freeze is the mechanism by which OriginOS preserves the integrity of its scientific history.

A frozen Sprint shall remain an immutable historical record of the programme's state of knowledge at the time of certification.

Future discoveries shall extend, refine, or correct that knowledge only through constitutionally authorized amendments and living constitutional registers.

No historical manuscript shall be silently rewritten after Constitutional Freeze.

Implementation Sequence

With RG-011 complete, your governance framework now establishes:

- **RG-009** — How dependencies are governed.
- **RG-010** — How constitutional language is governed.
- **RG-011** — How scientific history is preserved.

These three standards work together: amendments update the **living registers**, while the **frozen Sprint manuscripts** remain permanent evidence of the programme's scientific evolution.
